Product Summary

The Continental (Euro Style) Delivery System provides excellent ergonomics and better asepsis for the user and patient. The new style of dentistry allows the user to reduce fatigue on the wrist, elbow, and shoulders as the handpiece and tubing are coming from above with a spring mechanism that produces minimal resistance. In addition, with the unique technology of the Flight spring mechanism it makes it easy for the handpieces to retract back to their resting positions after use.

Excellent for surgeons, dentist, veterinarians and any practitioner who is looking for a delivery system style that will help extend their practicing years.
